

Make teaching with tech easier

LanSchool from Lenovo

Our new classroom management software helps educators take on the additional demands of today's connected classrooms.

Today's K-12 teachers have been tasked with a difficult assignment. They've had to adapt to the rapid shifts of remote and hybrid education policies, exacerbating challenges they already faced — delivering a curriculum that meets rigorous standards and is inclusive of every child they teach.

An added obstacle can be a lack of training in the technology teachers must use. Student safety and mandated teaching requirements are often the most important training priorities for schools,¹ and there's only so much time in the school day. Teachers find themselves with little room to focus on their mission to educate the next generation.

Enter LanSchool from Lenovo, a locally hosted or cloud-based classroom management solution, available for use in single classrooms and entire school districts. Built to address teachers' mounting tech challenges, LanSchool software is designed for easy onboarding. Teachers can then focus their attention on creating one-on-one connections that help their students thrive. Integration is simple, updates are automatic, and it's ready to scale with any school's or district's needs.

Lenovo

Situation and challenge

Varying degrees of digital literacy.

Teachers, staff, parents, and students all have different comfort levels with technology. Resources and training capacity for addressing needs are limited.

1%

of schools identify technology training as a priority.¹

41%

of teachers disagree with their school's training priorities.¹

SOLUTION USE CASE

Building every teacher's tech confidence while keeping students safe.

We needed to help teachers refocus away from computers, back to learning and teaching. Students were finding settings we didn't know existed to get around our security. So many things you want to do on LanSchool Air just take one or two clicks of a button. The user interface is very [teacher] friendly.

Mallory Brito, grade 2-5 language arts teacher, Washington Elementary²

Serve everyone in the room and online

LanSchool's user-friendly features help facilitate high-quality instruction in any learning environment.

Empowering teachers

- › **Screen monitoring.** View all screens simultaneously and discreetly redirect any off-track students.
- › **Limit websites.** Permit access only to approved websites to keep students safe.
- › **Push websites.** Launch the same website to each student's device simultaneously.
- › **Blank screen.** Clear students' screens to focus on the lesson or signal a screen break.
- › **Battery status.** Check the life of every device to avoid downtime.

Encouraging students

- › **Raise hand.** For better student-teacher communication.
- › **Direct messaging.** So students feel less afraid to ask for help.
- › **Screencast.** To improve comprehension and help the entire class follow along.

Situation and challenge

Blended learning. Teachers have more variables to juggle during a lesson than ever before; keeping students cybersecure and on task can threaten to overshadow the moment's curricular goal, especially in a hybrid classroom with students attending in person and remotely.

SOLUTION USE CASE

Improving student success through increased real-time collaboration.

The teachers love LanSchool for classroom management.

Teachers can push files to students and collaborate with them. They don't have to be at a computer to see what students are doing. If they see something cool on a screen, they can put it up on everyone else's computer.

Lenovo

Situation and challenge

Distractions and gaps. Between navigating students' knowledge gaps, technology skills, and short attention spans, teachers are dealing with a web of potential distractions. Students would benefit from personalized educational experiences and teachers need tools to provide them.

SOLUTION USE CASE

Keeping distracted students focused without interrupting class.

If multiple students are on task but a few aren't doing what they should be, the teacher can blank their screens or send them a personalized message without interrupting the flow or embarrassing those students. Students get the message really quickly that teachers are watching what they're doing.
